

HOW TO RESTORE THE OPERATING SYSTEM WHEN THERE IS AN OVERLAY

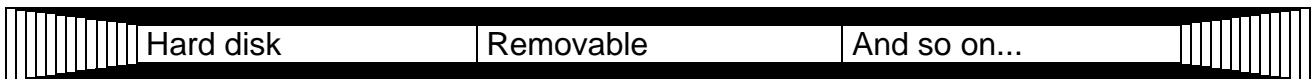

In order to restore the original status of our software you must execute the following procedure...

When you switch on the machine, press again and again the button **F8**^{***} as far as you can see a window in which there will be more choices of "boot"; You must choose **Enhanced Write Filter Restore Mode (restores one level)**.

Press Enter and then choose **Microsoft Windows XP Embedded**; press again Enter and then choose the option **multi(0)disk(0)rdisk(0)partition(1) – current level 1**; press Enter and at the end press the button **F2**.

Now, in this step, the system will start again as if it would be "new".

^{***}in the case in which a window of this type appears:

You must choose hard disk and immediately after you must press the button **F8** as far as...
