

SPENCER ROGERS
Web Developer

github: <https://github.com/serogers>
web: www.spencerrogers.com
where: Seattle, WA

PROFILE

Enthusiastic and dedicated web developer with a passion for Ruby on Rails, clean designs, and continued education. I have been the lead developer in building two production-level Rails web applications; one an internal project management app, and the other an external subscription based analytics platform. I have also had the opportunity to enhance and maintain several .Net based web applications using both C# and VB.

TECHNICAL EXPERIENCE (IN YEARS)

MOVING FORWARD

It is one of my goals to constantly be learning something new, so in that vain, I am actively working to get better at:

- * Testing with Rspec & Cucumber
- * Hosting with nginx & mongrel
- * Photoshop & Illustrator CS5
- * Appcelerator Titanium (mobile)
- * Objective-C and Xcode

WORK EXPERIENCE

SOFTWARE ENGINEER, AMERITEST; ALBUQUERQUE, NM — 2006 - PRESENT

Hired with the goal of increasing company-wide efficiency through software innovation, I worked on a small team to dramatically shape the company's technology-driven competitive advantage. We successfully completed an overhaul of many software systems, including migrating a large internal web application from C# on Windows to Ruby on Rails on the Mac. We also developed several custom tools that helped push the company into a new level of efficiency.

As a major player during the entire software development life cycle, I had a great opportunity to grow my skills while having a positive influence on our company's projects. I also gained knowledge in administering computer networks across multiple platforms, designing a Fortune 500 facing web application (in Ruby on Rails and Objective-J), designing and maintaining complex relational database systems, and providing continued support for all of these solutions. Finally, and most importantly, I learned to be a self-starter who is independent enough to seek out information and new skills when they are not readily available.

WEB DEVELOPER, SERVER ADMIN, WASHINGTON STATE UNIVERSITY; PULLMAN, WA; 2006 - 2007

At WSU, my duties ranged from redesigning the Psychology Department's Graduate Admissions Portal, implementing a number of psychology professors' online experiments, server debugging, backup and maintenance, and enhancement of the Psychology Department's Undergraduate Experiment Portal.

OTHER EXPERIENCE

CORE_IMAGE RUBY GEM; 2012

In order to simplify the way Mac developers deal with image manipulation, I have created a RubyGem called "core_image" that harnesses the power of Apple's built-in imaging technology. This gem allows developers to easily scale, crop, flip, rotate, convert, tint, and overlay images on the fly without reinventing the wheel. The source code and instructions for this gem are available at: https://github.com/serogers/core_image

EDUCATION

Washington State University, Pullman, WA; Major: Management Information Systems, Minor: Economics; 2009
