# Blogger IQ – INCREDIBLY USEFUL WP CODES

*And one bonus tip at the end for WP Dashboard.*

| | | | |
|---|---|---|---|
| 1 | <sup> tag: | this creates a superscript of letters or numbers. Especially useful when you want to show a copyright symbol like TM. Or to show mathematical notations and 'to the power of' numbers. | <sup>text</sup> |
| 2 | <sub> tag: | The <sub> tag helps in creating, you guessed it right, a subscript of alphanumeric characters. | <sub>text</sub> |
| 3 | <hr /> tag: | The <hr /> comes in handy when you want to insert a horizontal row in your blog posts. | <hr />text</hr /> |
| 4 |   | The is that inevitable non-breaking space required in your blog posts. Use   in your code editor and you get an awesome line space. Similar to the <br> break tag in HTML. |   |
| 5 | "CTRL + K" - Keyboard shortcut | When you are in WP editor, just hit *ctrl k* - it will bring up the 'insert hyperlink' option with settings. | None. Just hit the keyboard shortcut *ctrl K* |
| 6 | <a> tag: | <a> tag along with href attribute helps you to insert custom hyperlinks - this is similar to inserting hyperlink option given above but through a different way. | <a href="http://bloggeriq.com"></a> |
| 7 | rel attribute with nofollow value | If you want to avoid your SEO ranking flowing to outbound hyperlinks, use the <rel> attribute with nofollow as its value. This also sits inside the <a> tag. | <a href="http://bloggeriq.com" rel="nofollow"></a> |
| 8 | target blank | The "target" attributes more often accompanies the "rel" tag. This is used to have the link open either in a new tab or window. Syntax: Target="_blank" | <a href="http://bloggeriq.com" rel="nofollow" target="_blank"></a> |
| 9 | img tag with src attribute | Insert images from another location using the *src* attribute. | <img src="http://bloggeriq.com/folder/image.png"> |

|---|---|---|---|
| 10 | reorder lists - restart numbering | Don't want to restart numbering in your multiple ordered lists? Use this trick. Use the *start* attribute inside <ol> tag. | <ol start="9"> |
| 11 | <code> tag | Want to show a sample code in your WP editor without accidentally inserting a functional code in your blog? Use this tag. | <code> insert code here </code> |
| 12 | <blockquote> tag | Want to highlight or quote someone? <blockquote> is the way to go. | <blockquote> insert text here </blockquote> |
| 13 | read more tag | Want to show a page breakup between posts so people can click 'read more' to continue reading your blog posts? Use the *read more* tag. | <!--more--> |
| 14 | WP Dashboard trick | Just click on the top most header toolbar in WP dashboard that has WP logo, your site name, and that greeting 'Howdy, username'. It will immediately scroll up to the top. | None. Just hit on the WP header toolbar. |
