

Linux Boot Camp

25/26/27 July 2007

- Have you ever wanted to get more out of your computer and gadgets?
- Do you want to know more about Linux and the open source software that make the Internet fun?
- Do you want to know more about what is in all these boxes that we use every day?

**If so then the
Linux Boot Camp
is for you!**

The Linux Boot Camp is aimed at those, normally doing or having done A levels, who want to do practical technical computing. We want you to get in touch with your inner geek!

The event will involve two and half days of technical workshops exploring many aspects of modern technology and the use of free open source software. During the workshops you will learn how to revitalize your PC (or even resuscitate a dead one!) by installing and configuring Linux on it. Useful skills such as how to set up a home network and web server will be given. You could learn how to make your own router, or how to hack into various set top boxes. At the end of the Linux Boot Camp you will be able to tap into the world of open source computing and maybe set yourself off on a profitable and worthwhile career.

If you already know how to do some of this stuff, then don't despair, the structure of the Linux Boot Camp will allow you to explore advanced topics in system configuration.

The numbers are limited to about 60 places, so don't delay. There are a small number of residential places (12), staying in UWE's brand new student accommodation, (cost of approx £25 per night). During the Linux Boot Camp there will be social events in the evenings, such as films and barbecues.

As if that wasn't enough the Linux Boot Camp will give you the chance to experience what life could be like at Uni and will look great on your CV or UCAS form!

For further information or to book your place contact **Pat Cottrell** or **Craig Duffy** on lbc@uwe.ac.uk or **0870 901 0767**.

Technology for people
