

Review & Practice

Ecosystem Hanger

Created By The Owl Teacher

TEACHER'S INFORMATION PAGE

This resource is meant to be an engaging way for your students to review the various ecosystems.

In this resource, you'll first find a page with the topper and the cut-out boxes. Students will cut around the topper on the dotted line carefully, leaving the rectangle box on the bottom. This box is needed for when attaching the description boxes. (See image on the cover).

Next, students will need to cut out the square boxes, or cut-outs. This sheet may have more boxes than you will use. Your students do not need to use every one. You can pick and choose which ones your students use or have your students do so.

With this hanger, you can have students group the two polar regions (arctic/tundra and Antarctic) or have them do them separately. I have also done this with other ecosystems too (ie: aquatic or freshwater and marine; grasslands or savanna and prairie; etc.) Some ecosystems are also listed twice but under a different name. This was done intentionally in case your school district calls it something else.

I have also included blank pages at the end, not only for names that are not included, but also so that if you'd rather have your students focus on ONE ecosystem and then use the description cards for focusing on characteristics, students can do so. I have also left the boxes blank so they can draw an image in them instead.

Once students have all the boxes from the cut-out page removed that they will use, provide them with the corresponding description card pages.

On the description cards, I have students glue their cut-out boxes that corresponds with the title of the box (or draw an image) and then on the lines write some basic facts about that ecosystem. This is at your discretion as to what you would like your students to include.

I have my students color the images in the cut-out box, along with the topper, for creative display. Then I have students assemble the hanger per the directions on the cut-outs page.

This hanger not only makes a perfect display, but it is also great for centers, homework, partner work, independent work, and so much more!

I hope your students find this hanger engaging and as a great way to review content information.

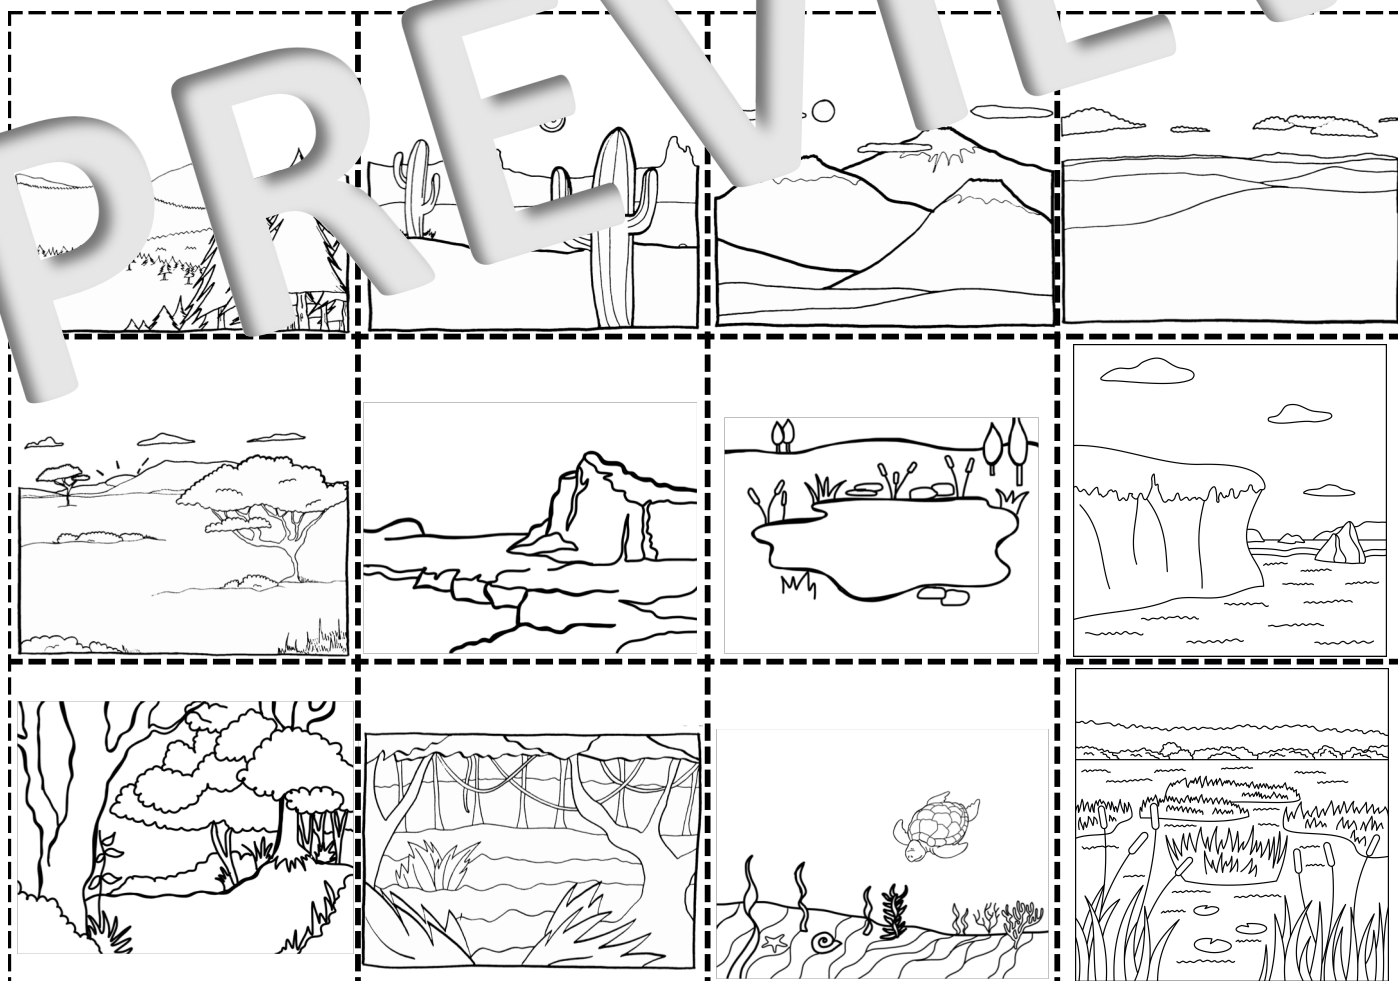

Directions

- 1.) Carefully cut out the ecosystem topper to the left. When cutting out the topper, leave the glue box attached to the oval topper.
- 2.) On the other pages titled "Description pages," cut out the rectangles and fold them in half on the dotted line.
- 3.) Next, glue the appropriate ecosystem in the image square of the rectangles.
- 4.) Describe each ecosystem and provide interesting facts.
- 5.) Place a small amount of glue on the square that says "place glue here" and place the glue box on the top of the glue strip, starting with the top and working your way down.
- 7.) Color.
