Biomes

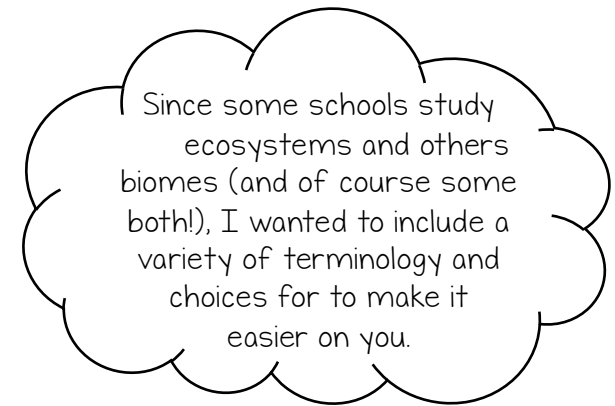

Ecosystems

By The Owl Teacher

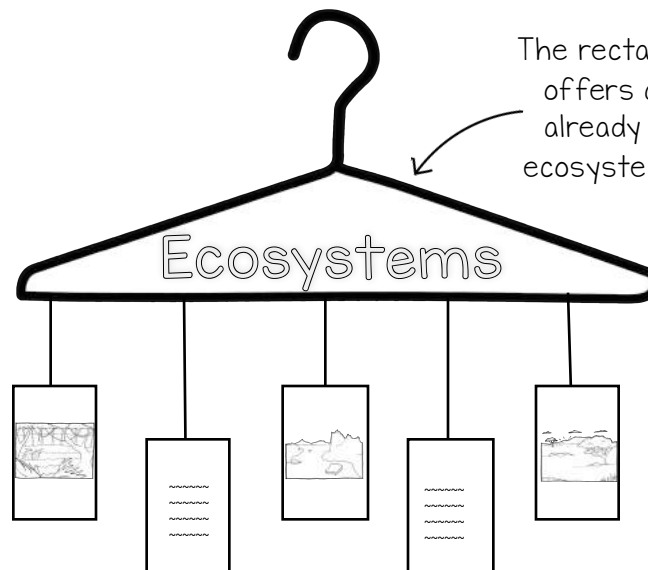

Have students create one for a specific ecosystem and the hanging parts describe the animals, plants, climate, fun facts, and locations of that ecosystem. Students would create a picture of the ecosystem to place inside the hanger or just write the name.

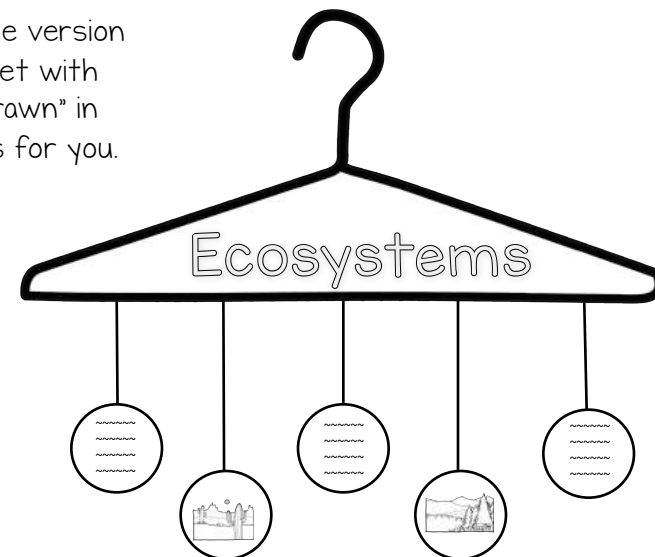

3 Options for your Hanging Mobile

In this option, they are the same, but the shape is different. You can choose to use rectangle shapes or circles. Each hanging piece is an ecosystem. Students will draw and color the ecosystem on one side and describe it on the other.

The rectangle version offers a set with already "drawn" in ecosystems for you.

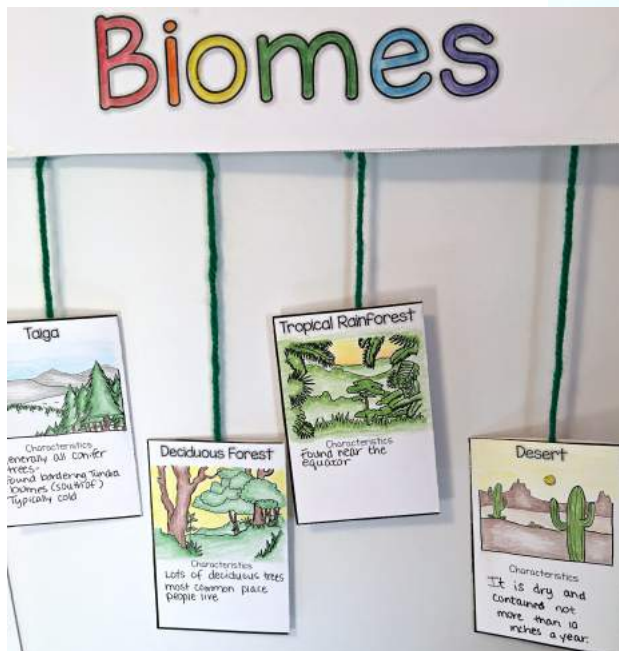

Option One

The Front (of those with a picture already on it)

The Back

When the card is open either tape or glue the string down. Then fold and glue the card closed over the string.

Option Two

Students hand draw and color on the front the particular ecosystem.

And write all about it on the back. Just like the rectangle cards, they will need to tape or glue the string down and then glue the circle flaps closed. They may also need to trim the circles for an even look.

Option Three

Students can choose among the options provided for each section.

They can use the label "ecosystems" across the top or they can create their own with the name of the ecosystem they are representing.

This one is the Tropical Rainforest

This one is the Temperate Grassland (Prairie) Ecosystem
