A fixed mindset is a belief that our abilities, intelligence, and talents are fixed traits that cannot be changed. Those with a fixed mindset believe that failure is a sign of inadequacy. Individuals with a fixed mindset are often afraid to take risks and give up easily. For example, a student with a fixed mindset might think they are "just not good at math" and avoid taking challenging math courses or attempting difficult math problems.

In contrast, a growth mindset is a belief that our abilities, intelligence, and talents can be developed through hard work and practice. Those with a growth mindset believe success is a result of effort and persistence. Those with a growth mindset embrace challenges. For example, a student with a growth mindset might believe that they can improve their math skills through practice and hard work. Similarly, an athlete might believe they can improve their performance through training and practice.
